PROFILE

Backend developer focused on Java, Spring Boot and PostgreSQL. Project experience includes payment reconciliation, secure payment workflows, delivery evidence verification and API monitoring. Interested in backend and software engineering roles, with an emphasis on clear business rules, data integrity and maintainable APIs.

TECHNICAL SKILLS

Backend: Java, Spring Boot, Spring Security, REST APIs, Spring Data JPA, Hibernate
Data and infrastructure: PostgreSQL, Flyway, Docker, RabbitMQ, Redis
Tools and practices: JWT, JUnit, Mockito, Maven, Git, GitHub Actions, OpenAPI

EXPERIENCE & COLLABORATION

Software Engineer Intern | Orbit Team
School Team Volunteer | School team
Backend Contributor | 5ive Digital Banking (team project)
Contributed through assigned implementation tasks, collaborating with teammates on a Spring Boot digital banking application.

SELECTED PROJECTS

MandateGuard | AI-agent payment authorization

Built mandate-based spending controls with RSA-signed requests, nonce replay protection, idempotency and human approval. Used PostgreSQL row locking to protect spending limits under concurrent requests. Payment provider execution is simulated.

PayRecon | Payment reconciliation

Built workflows to compare internal and provider CSV records, categorize transaction discrepancies and support investigation. Added maker-checker resolution approval, summaries and audit history.

RouteGuard | Delivery evidence verification

Built company-scoped delivery ingestion with API-key authentication and idempotency. Implemented GPS, OTP and photo-hash checks, explainable evaluation decisions and human review workflows.

APIWatch | Endpoint monitoring

Built scheduled HTTP monitoring, response-time classification, outage and recovery email alerts, check history and uptime reporting. Added ownership controls and validation of public monitoring destinations.

Additional projects: SecurePay (payment and webhook simulator), ModelRisk Lite (controlled model evaluation and review), Smart Expense Tracker (expense and budget backend). Source repositories are available on GitHub.
